

Procurix

You say what you need to buy. It **emails your suppliers, reads their quotes, and tells you which to take and why** — then makes sure you pay on time, because in India paying a small supplier late now costs you tax.

WORKING CODE

github.com/NikhilYadav04/procurv_ai

Buying is still email. And since 2023, paying late is a tax event.

Five suppliers, five formats, one spreadsheet

A PDF, a photographed letterhead, four lines in a mail body. Retyped by hand.

What one purchase costs today

- 5 mails** Written one at a time, each with the specification pasted in again
- 2 weeks** Waiting, then chasing the three who did not reply
- by hand** Every quote retyped into a spreadsheet to line them up
- not comparable** “Net 30” against “50% advance” — so terms get ignored and price decides
- lost** Why that supplier was chosen. It leaves with the inbox

Section 43B(h), Income Tax Act

45 days Maximum you may take to pay a Udyam-registered micro or small supplier

15 days If no written payment term exists — which is most SME buying

3× bank rate Interest, compounded monthly, and itself non-deductible

Deduction Moves to the year you actually pay. Not forgiven — deferred

Nothing happens on day 46. The firm finds out at audit, ten months later, when nothing can be done.

TARGET USERS

The person who *is* the procurement department

PRIMARY

The SME buyer

₹5 Cr – ₹500 Cr turnover. Construction, manufacturing, facilities, hospitality. One or two people, often the founder or a site engineer. No procurement software — Ariba and Coupa are built and priced for enterprises.

BENEFITS WITHOUT USING IT

The MSME supplier

Never logs in. Replies to email, or opens an auction link. Gets paid on time because their buyer can finally see the deadline.

THEY BUY	Steel, furniture, fasteners, safety gear, site consumables — repeat categories, not one-offs
HOW OFTEN	Several orders a week, every week
SUPPLIERS	20 to 100 on the books, most of them small local firms — so MSME exposure is the norm, not the exception
TODAY	Email, Excel, and one person's memory

WHY IT MUST BE AGENTIC

Three properties defeat a form, a workflow engine, and a chatbot

1 You don't control the input

Quotes arrive as scans and photographs. Portals fix this by making the supplier fill a form first — **which is exactly why they never reach Indian SMEs**. An agent reads whatever arrives. The mess is the reason it must be a model.

2 It's a chain, not a transaction

One sentence expands into eight steps spread over days. A revised price, a missing delivery date, a vendor replying late — **the branches are not a closed set**, so they cannot be declared in advance.

3 The criteria change every time

Cheapest is not best. This month delivery decides it, next month payment terms. And always: **is this supplier MSME** — because that sets when you are legally obliged to pay.

Not for: large enterprises already running a procure-to-pay suite, government tendering, or consumer buying. The wedge is firms whose statutory obligation is identical to an enterprise's but who have no system at all.

One chat box runs the loop, and keeps the record it currently loses.

YOU TYPE

"I need 250 workstation desks — get quotes from Kumar, Rapid and Godrej"

IT DOES

1 writes the RFP and numbers it 2 emails all three from your Gmail 3 reads the PDFs they send back 4 ranks them

IT SAYS

"Kumar ₹31.2 L but 45 days out. Rapid ₹33.5 L in 21 days, wants half up front. Godrej ₹34.8 L, dearest, longest warranty."

YOU DO

Raise the delivery weight → ranking flips to Rapid → award → purchase order issued

OR JUST ASK IT

"What quotes are waiting on me?"

"Am I at risk on any MSME payments?"

"Draft a counter-offer to Godrej"

"Start a reverse auction for the desks"

"Record the invoice for PO-9005"

"Add these 12 vendors"

"Generate this month's report"

Live

working software, not a concept

The agent decides. Deterministic code computes.

Measured, not projected.

Buying on merit, not on the first reply

REQUIREMENT	HIGHEST	AWARDED	SAVED
120 storage racks	₹21.20 L	₹18.40 L	13.2%
Fasteners contract	₹10.85 L	₹9.60 L	11.5%
500 chairs	₹26.10 L	₹24.50 L	6.1%
250 desks (<i>auction</i>)	₹34.80 L	₹30.12 L	13.4%

Difference between the winning and highest quote on the same requirement, from the running system.

The exposure nobody sees until it is permanent

₹4,60,000

Tax falling due this year on one unpaid ₹18.40 L invoice to a micro supplier, past its 30-day term — plus interest at 3× the bank rate, compounded, non-deductible.

The remedy costs nothing. Pay on day 44 instead of day 46. The entire value is that somebody knew.

43B(h) binds every Indian buyer with MSME suppliers from FY 2023–24. Enterprises absorbed it through existing systems. The firms most exposed absorbed nothing, because nothing was built for them.

What we have not solved: we do not discover suppliers — vendors are added by the buyer. GSTIN structure and check digits are validated offline, but live registry verification is not yet wired, so MSME status is recorded rather than proven, and the interface says so. Nothing runs on a schedule yet; a background watcher on the inbox and the payment clock is next.
